

ABSTRACT

A navigational system which provides a user with a plurality of routes between a starting point and a destination for selection is described. The navigational system includes a calculation unit for calculating a first route from starting point to destination. It further includes a reproducing device for reproducing the calculated first route. The calculation unit calculates at least one second route, which differs from first route, from starting point to destination. The reproducing device reproduces the at least one calculated second route in addition to the first route.
